

FIDES GATE

The Verified Consent Layer for AI Crawling

Every AI licensing rule today runs on an honor system — a crawler simply declares what it plans to do with your content. We built the layer that checks whether it told the truth.

11,122 : 1

Pages fetched by one major AI crawler for every referral sent back to a publisher.

This ratio is our whole pitch.

PITCHED BY : TEAM — ANOMALY

VERIFY FIRST / TRUST SECOND

AI Crawling Broke the Deal Between Creators and Search

96%

Less traffic from an AI chatbot answer than from a traditional search click-through.

20-90%

Publisher traffic & ad revenue reportedly lost to AI-mediated answers, year over year.

~1%

Of chatbot users ever click through to the source that was actually cited.

70%

Of publishers now expect AI licensing deals to generate real revenue within 3 years.

This is not a fringe complaint anymore. *NYT v. OpenAI* was the opening case, not the last one — and Cloudflare has already committed that from September 2026, new free sites will default to blocking AI training while still allowing search indexing.

The industry has decided intent-differentiated access is inevitable. What it has not solved yet is whether a crawler can be trusted to tell the truth about which one it is doing.

Four Real Tools Are Already Live in 2026. All Share One Blind Spot.

WHY THIS ISN'T 'THE SAME THING AGAIN'

	Sets Rules	Blocks or Charges	Verifies Identity	Proves a Lie After
robots.txt / Content Signals	✓	✗	✗	✗
RSL — Reddit, Yahoo, Medium, O'Reilly & more	✓	✓	✗	✗
Cloudflare Pay-Per-Crawl	✓	✓	✗	✗
TollBit / ScalePost marketplaces	✓	✓	✗	✗
Not one of these can prove a crawler lied about its intent. That's the exact gap Fides Gate closes.				

Fides Gate Is a Verification and Enforcement Layer

Fides Gate is a verification and enforcement layer placed between publishers and AI crawlers. It verifies crawler identity and requested intent before deciding what content the crawler receives.

Instead of simply allowing, blocking or charging a crawler, Fides Gate dynamically delivers the appropriate content tier for the verified purpose.

IDENTITY VERIFIED

INTENT CHECKED

TIERED PAYLOAD

ACCESS SHOULD MATCH PURPOSE — NOT JUST A HEADER.

We Found the Loophole Every ‘Intent-Based’ Tool Runs On — Then Closed It

THE LIE

Self-declared intent is an honor system

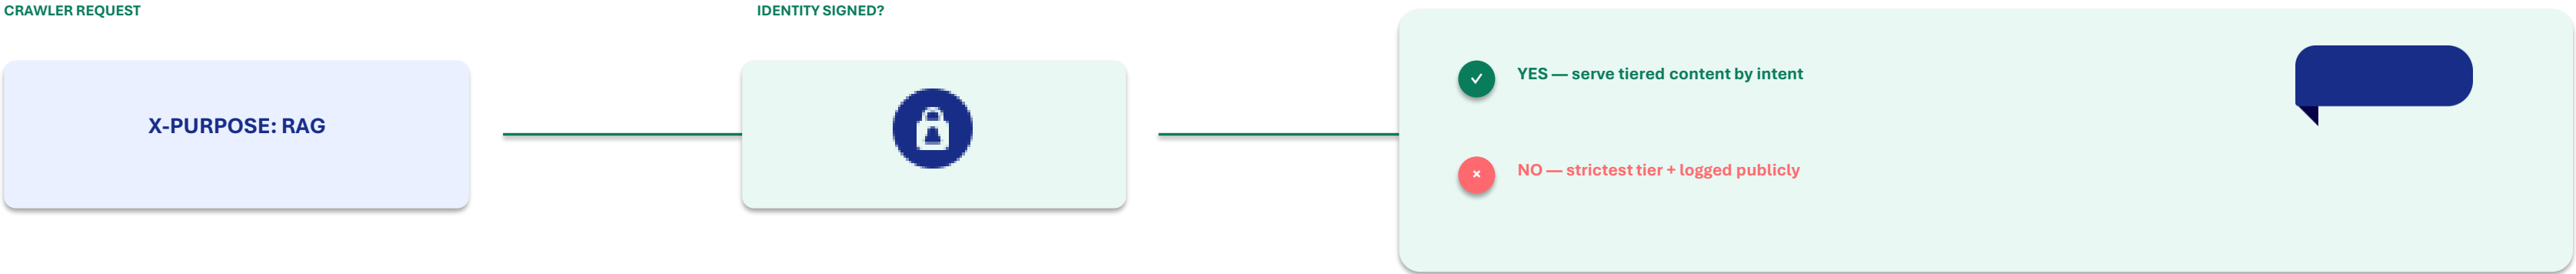

A crawler simply sends “X-Purpose: RAG,” receives the full text, and trains on it anyway. Nothing ever checked if it told the truth.

THE FIX

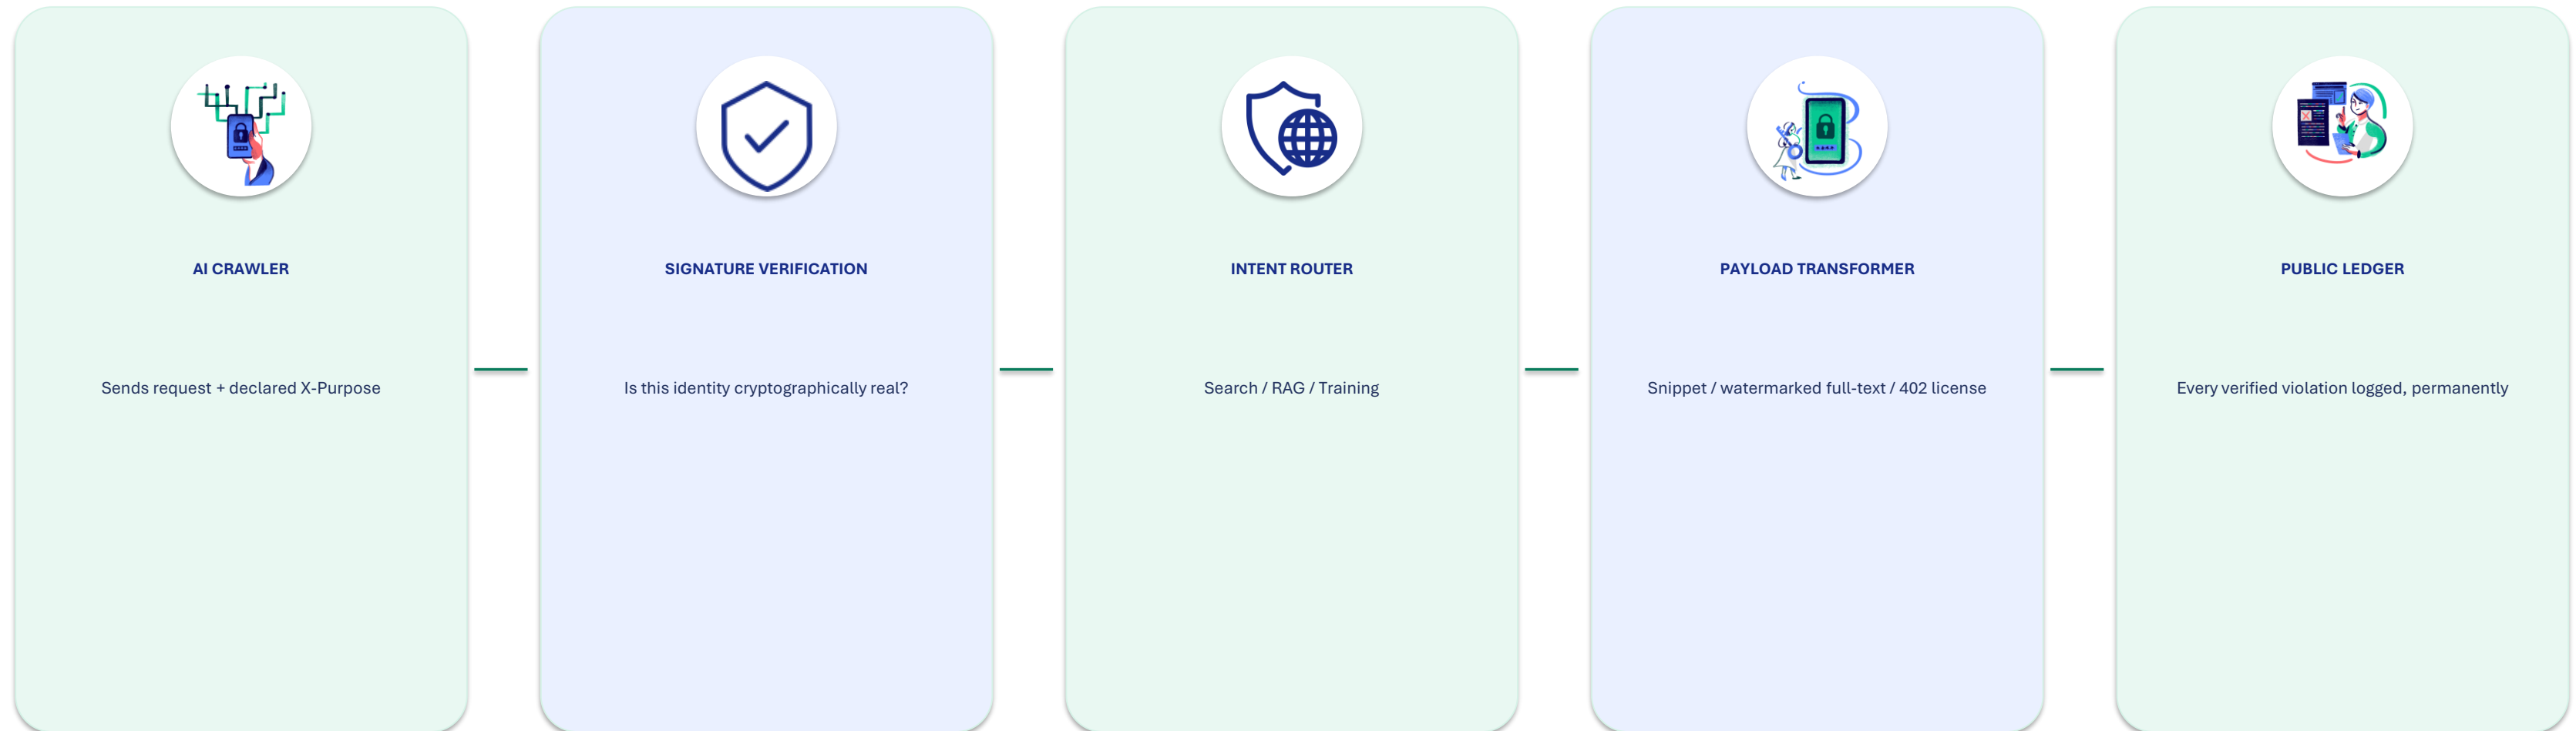

Fides Gate verifies before it trusts

Cryptographically signed identity + content tiered by verified intent + forensic watermark + a public, permanent violation ledger.

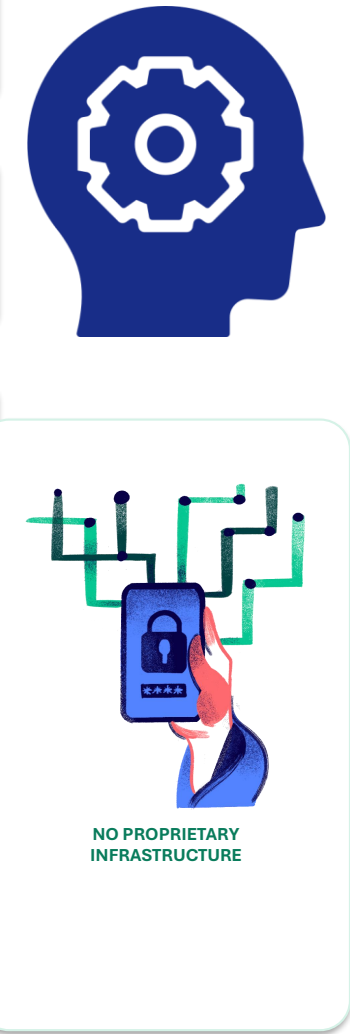

One Gateway. Four Checks. Zero Blind Trust.

Built on the standards that already won — not a fifth competing protocol. Fides Gate reads RSL's license.xml and speaks HTTP 402 natively. It sits on top of Cloudflare Content Signals, RSL, and 402-based marketplaces as their missing verification and accountability layer.

Five Layers, All Open-Source, All Swappable

No proprietary infrastructure, no blockchain, no vendor lock-in — every layer ships on tools already proven at production scale.

Risk Management

01

Risk Identification

Identify potential threats and vulnerabilities affecting systems, data, and operations.

02

Risk Assessment

Evaluate likelihood and impact of risks to prioritize mitigation actions.

03

Risk Mitigation

Develop strategies to reduce or prevent identified risks effectively.

04

Incident Planning

Prepare response plans for risks that materialize or cause incidents.

From Hackathon Proxy to Industry Standard

“Verified-Clean” API

AI companies display or query a compliance badge backed by real signed history.

01

Standardize, Don't Compete

Propose the signature + ledger spec as an open RSL extension, not a rival protocol.

02

Multimodal Forensics

Extend canary watermarking beyond text to images and video as scraping expands.

03

Zero-Migration Rollout

One-click plugin for Cloudflare & WordPress — no infrastructure change required.

04

Every AI licensing standard tells a crawler what it's allowed to do.
Fides Gate is the one that catches it when it lies — and says so, publicly, forever.
